

## Success rates

The success rates for transplantation in New Zealand are comparable to the international rates. The table below shows the patient survival rates at one year and five years for hearts, lungs, livers and the graft survival rates for kidneys and pancreas' in NZ. These figures are from deceased donors only.

Organ	1 Year	5 Year
Heart	90%	78%
Lungs	80%	60%
Liver - adult	96%	89%
Liver - paediatrics	93%	92%
Pancreas	92%	87%
Kidneys	91%	82%
